Figure 5

Figure 6 shows the results of the ELISA assay for the detection of anti-HBsAg, anti-HBcAg, and anti-HBeAg in the sera of patients with chronic hepatitis B virus infection. The results are expressed as optical density (OD) values. The OD values for anti-HBsAg were significantly higher in the sera of patients with chronic hepatitis B virus infection compared to the control group (p < 0.05). The OD values for anti-HBcAg and anti-HBeAg were also significantly higher in the sera of patients with chronic hepatitis B virus infection compared to the control group (p < 0.05).
